Orientation
Git

Jane Marie Pareja

March 16, 2026

I attended this workshop to learn how to use git so I could backup my works on fontys git. But because I was already using github, I was not really able to follow the speaker during the session because I was scared to mess up my github repository. I did some research on how to use two repositories with one push and I managed to do it. See Figure 1, 2, and 3 to illustrate that they are both working with one push command.
