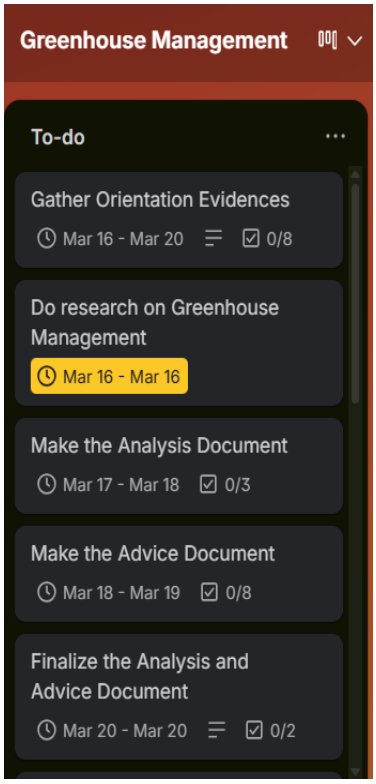
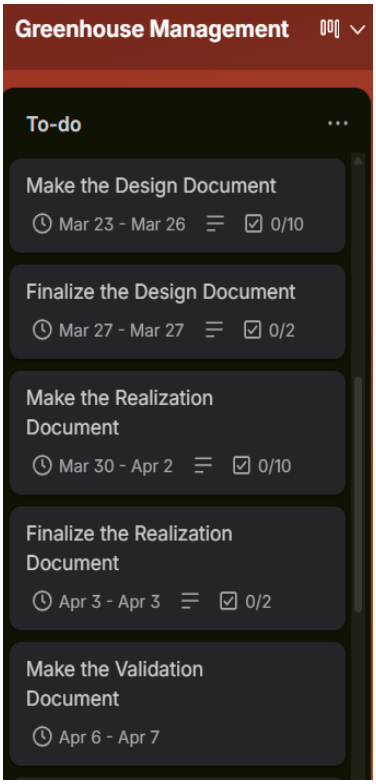
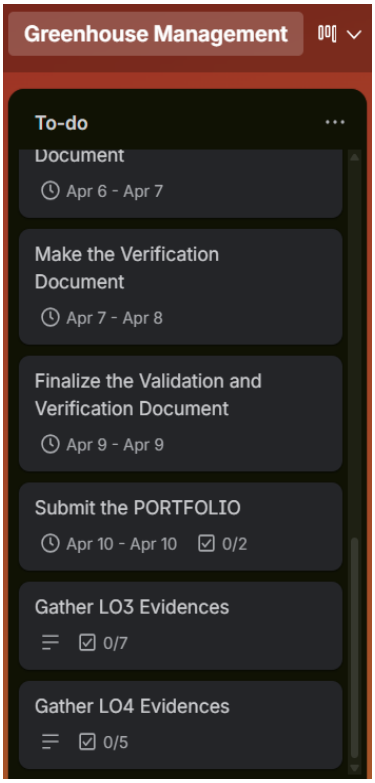
Project Plan|Schedule via Trello.com

This document aims to show how I decided to manage my project two. I have learned from my first project that a good project management plan would be very useful, especially when you are only given a short time to work on it.

On my first project, I had no idea where to start so I asked ChatGPT to make a realistic planning for me, which didn't turn out to be as expected.

This time around, I was introduced with Trello and I used it to make a to-do list and set deadlines on each of them.






This will help me keep track of the things I need to do and which task/s to prioritize so I won't be everywhere without a proper goal.
