
i need an html template

Nice wireframe 👍 — I'll turn this into a **clean HTML template you can use directly**.

🌱 Greenhouse Dashboard HTML Template

This matches your layout and is ready to connect to data later.

```html
<!DOCTYPE html>
<html lang="en">
<head>
    <meta charset="UTF-8">
    <title>Greenhouse Dashboard</title>
```

```
<script src="https://cdn.jsdelivr.net/npm/chart.js"></script>
<style>
    body {
        font-family: Arial, sans-serif;
        background: #f5f5f5;
        margin: 0;
        padding: 20px;
    }

    h1 {
        background: #ccc;
        padding: 20px;
        text-align: center;
    }

    .container {
        max-width: 1200px;
```

🎯 What this gives you

✔ Matches your wireframe

✔ Has:

- Top stats cards
- Graph area
- Alerts section
- Historical section

✔ Already includes:

- Chart.js for graphs

🚀 Next Step (Important)

To connect your **SQLite data**, replace this part:

JavaScript

with:

```
fetch("http://localhost:5000/api/readings")
  .then(res => res.json())
  .then(data => {
      // update UI here
  });
```

💡 Want to level it up?

I can help you:

- Connect this **directly to your SQLite API**
- Add **multiple graphs (humidity, soil, light)**
- Make it look **modern (dark mode, colors, animations)**

Just tell me 👍

sqlite3.OperationalError: unable to open database file how to solve this
