how to make this project in mobile view

Great question—making your dashboard **mobile-friendly** will really improve your project quality 📱✨

You don't need to build a separate app. You can make your existing website responsive using **HTML + CSS**.

🌱 How to Make Your Project Mobile View

✅ 1. Add Viewport Meta Tag (VERY IMPORTANT)

Put this inside `<head>` :

HTML

👉 This makes your site scale properly on phones

✅ 2. Use Flexible Layout (Flexbox)

Update your stats section:

```
.stats {
    display: flex;
    flex-wrap: wrap;   /* allows wrapping on small screens */
    gap: 10px;
}

.card {
    flex: 1 1 200px;   /* responsive size */
}
```

👉 Cards will stack automatically on mobile

✅ 3. Make Layout Responsive with Media Queries

Add this CSS:

```
@media (max-width: 768px) {

    .stats {
        flex-direction: column;
    }

    .bottom {
        flex-direction: column;
    }

    .box {
        width: 100%;
        margin-bottom: 10px;
    }
```

```
    h1 {
        font-size: 20px;
    }
}
```

👉 This changes layout for phones

✅ 4. Make Graph Responsive

For your chart:

```
.graph {
    width: 100%;
    height: auto;
}
```

CSS

And in JavaScript (Chart.js):

```
options: {
    responsive: true,
    maintainAspectRatio: false
}
```

JavaScript

✅ 5. Improve Mobile UI (Optional but Good)

Make text bigger and clearer:

```
.card {
    font-size: 16px;
    padding: 20px;
}

body {
    padding: 10px;
}
```

📱 Mobile Layout Result

Desktop:

```
[ Temp ] [ Humidity ] [ Soil ] [ Light ]
[ Graph ]
[ Alerts ] [ History ]
```

Mobile:

```
[ Temp ]
[ Humidity ]
[ Soil ]
[ Light ]
[ Graph ]
[ Alerts ]
[ History ]
```
